

# Thermo<sup>®</sup>

COVERS

## Installation Instructions

No screws, drilling or additional supports required.

- Clean the ceiling surface.
- Break out tabs, remove cable entry, and place electrical cables into cable holders.
- Place flush to ceiling slab.
- Use intumescent bonding paste or tape to secure the base of the Thermo Cover.
- Insulation can be placed around and over the Thermo Cover Fire Prevention Unit.
- Lid position is optional, see below.
- Lid Open = Venting of heat (prevents overheating of music speakers or lighting).
- Lid Closed = Increased Air Tightness (energy saving).
- Suitable for use with 50W DC lighting with transformers.

## Maintenance Free:

- It is easy to fit and maintenance free.
- When you need to locate your light fittings, you can do so with a location tab which you can place in the lid on the top of the cover.

## Dimensions:

- Length – 270mm, Width – 270mm, Height – 200mm
